

STRINGTone® covers all the maintenance needs of your guitar from the headstock to the bridge.

STRINGTone® performs in the lab-test Scanning Electron Microscope images below!

HEAR & FEEL THE DIFFERENCE®

Until now the care and maintenance of guitars and other string instruments has been reliant on a confusing mix of products: some that clean, others that condition, and still others that lubricate. Now, for the first time, a single ground-breaking product can handle the demands of guitarists, guitar techs, luthiers, and other string instrument players—SoundSynergies® STRINGTone®. The result of micro-barrier technologies from the field of high-precision ballistics applications, STRINGTone® is unequalled in its ability to penetrate and lift away deeply embedded grime and tiny debris particles. This deep conditioning allows treated strings to vibrate without restriction, providing superior sustain and richer, more vibrant sound quality. STRINGTone® dries to the touch in seconds so that you can experience the increased tactile sensation of your guitar strings immediately.

A Revolution in Guitar Maintenance

Opening new possibilities for musicians seeking to maintain the tone and feel of their instruments, STRINGTone® allows a new level of guitar maintenance that goes beyond the superficial treatments available up until now. At a price that's mere pocket change per treatment, STRINGTone® presents a very affordable alternative to more expensive products that are less effective.

Protection That Lasts

STRINGTone® offers long-lasting protection from grime and corrosion to lengthen the life of strings and other metal guitar components. Many standard guitar care products are silicon-based formulas prone to messy build-ups and migration that can potentially damage fine guitar wood finishes. STRINGTone's gentle formula is safe for all guitar woods, with a stable structure that resists migration and won't build up. STRINGTone's powerful ability to penetrate deep to the string core allows the removal of dust and debris that accumulate to dampen tone and string response.

Difference You Can Hear

Using STRINGTone® pays off immediately in increased dynamic range, enhancements in upper and bass frequencies and harmonics. For all the full, rich tonal quality your instrument is capable of, count on STRINGTone® to unlock your instrument's full sonic potential.

The Science of SoundSynergies® Proven Performance

Proven Performance Controlled tests conducted in an acoustic laboratory have verified SoundSynergies® effectiveness. Treatment with SoundSynergies® was found to significantly improve the dynamic range and overall frequency response of guitar and bass strings.

STRINGTone® ... Independently Tested. Proven Effective.

Above right are Scanning Electron Microscope images of a wound metal guitar string before-and-after application of STRINGTone®. The images clearly show the significant ability of STRINGTone® to lift away sound inhibiting grime and corrosion for improved harmonic resonance.
